

Protect Your Legacy with FORT

Enterprise-Grade Cybersecurity Services, Tailored to Protect High Net Worth Individuals and Family Offices.

A Shift in Cyber Risk From Companies to People:

Globalization, interconnected networks and devices, and the monetization of data have increased vulnerabilities and attacks across the web. Robust cybersecurity programs are limited to enterprises, with no sophisticated options available to individuals today. Experts expect cybercrime costs to grow by 15% per year over the next five years, reaching \$10.5 trillion dollars annually. As a result, hackers are refocusing on new targets, particularly the world's wealthiest and their Family Offices.

Tailored Protection for The World's Wealthiest

FORT is the first service to provide enterprise-grade security across cyber and physical environments. With FORT, people can expect protection and peace of mind as they leverage the power and complexity of the internet in their everyday lives.
