

Protect Your Legacy with FORT

Enterprise-Grade Cybersecurity Services, Tailored to Protect High Net Worth Individuals and Family Offices.

A Shift in Cyber Risk From Companies to People:

Globalization, interconnected networks and devices, and the monetization of data have increased vulnerabilities and attacks across the web. Robust cybersecurity programs are limited to enterprises, with no sophisticated options available to individuals today. Experts expect cybercrime costs to grow by 15% per year over the next five years, reaching \$10.5 trillion dollars annually. As a result, hackers are refocusing on new targets, particularly the world's wealthiest and their Family Offices.

FORT delivers confidential, intelligence-driven security solutions tailored to protect people, estates, reputation, and legacy. Our team of former senior law enforcement and Homeland Security experts provide strategic protection planning with absolute discretion

Estate Security Assessments

- Comprehensive Threat & Exposure Analysis
- Estate Vulnerability Evaluations
- Perimeter, Access Control, and Surveillance Systems
- Staff Risk Considerations
- High Risk Travel Advisory
- Lifestyle Pattern Assessment
- Event & Public Appearance Planning
- Law Enforcement Liaisons
- Dossier Reports

Electronic Surveillance Detection

Technical Surveillance Countermeasures
